DETAILED ACTION

This office action follows a response filed on September 19, 2006. Claims 26-32 remain pending.

Claim Objections

1. Claim 26 is objected to because of the following informalities: In line 4, replace "solvent" with "co-solvent" such that there is proper antecedent basis in the claim. Appropriate correction is required.
2. Claims 30-32 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claims, or amend the claims to place the claims in proper dependent form, or rewrite the claims in independent form. The claims depend from a canceled claim, and they do not limit further the subject matter of claim 26 which indicates that the co-solvent is an amine.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 26 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Ibar (U.S. 6,586,041).

Ibar discloses addition of triethylamine to an aqueous dispersion of PEDOT/PSS (col. 21, lines 5-13; Table 2)[†].

[†] This material appears to be commercially available as Baytron CPUD2 (see Baytron technical data sheet, attached).

Art Unit: 1713

5. Claims 28 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. To date, none of the references cited in this and the previous office action discloses use of pyridine in the context of the claimed process.

The closest reference is Lessner *et al.* (U.S. 6,001,281) which discloses polymerization of 3,4-ethylenedioxythiophene in a solvent mixture containing 1-butanol, 2-propanol, and pyridine (16/63.4/0.6 proportions). Clearly, the reference does not teach or suggest the claimed invention.
